Clutch's color system is built around four families: Red, Plum, Lavender, and Soft Black.

The core palette was already strong , these expansions add depth within each family so the brand has room to breathe across different surfaces and contexts. Every color added meets WCAG AA contrast standards when paired correctly.

Color Pairing

Clutch Red as a background is the brand at full volume. White carries the headline because it's the only color that meets contrast requirements at this weight on red, and it works.

Plum Deep as the accent copy adds hierarchy without competing; it's dark enough to read, warm enough to stay in the family. This is the highest-energy pairing, use it when you want to grab attention immediately

Color Pairing

Plum flips makes the brand feel bold and quality. White headlines read cleanly against the dark background over 12:1 contrast and Clutch Red as an accent it points. This pairing works especially well when the truck or brand imagery needs to pop off the background without the surface competing with it.

Color Pairing

Lavender is the palette's calm and is very useful for creating space. Plum on Lavender clears 7:1 contrast, making it ideal for body copy and long-form read. Clutch Red as the accent stays alive on this surface with enough saturation to pull focus without screaming. This pairing is the right choice for brand campaigns that lead with personality.

Color Pairing

Lavender Deep (#E6D6F9) is a new addition, slightly more saturated than base Lavender, it gives the palette a richer light option that still reads as brand-adjacent. Plum headlines clear accessibility on this surface.

The result is a pairing that feels more expressive than the lighter Lavender version, without crossing into a completely different brand register. Use it when Lavender feels too soft for the context.

PAIRING FOUR

Color Pairing

Soft Black (#191919) is not pure black it has just enough warmth to stay in the brand family. White on Soft Black is over 15:1 contrast, one of the highest-performing pairs in the system.

Clutch Red pops harder on dark surfaces than any other background, which makes this the go-to pairing for premium product moments, editorial content, and anything that needs to feel considered. it also prevents the brand from living only in red.

PAIRING FIVE

Color Pairing

The default. White backgrounds are the baseline for product UI and most web contexts. Soft Black as the headline color reads cleaner than pure black and keeps the brand feeling warm.

Red as an accent carries all the interactive weight, CTAs, highlights, links. This pairing is where most users spend the most time. Getting it right here is table stakes.

The same copy, same hierarchy, same structure, cross four backgrounds. This shows the color system is actually doing the work. Red, Lavender, Plum, and Soft Black each carry the message differently: urgency, lightness, depth, and premium. No pairing compromises legibility.

Brand

**Sell your car naked.
Or in clothes.
We're easy.**

**Sell your car naked.
Or in clothes.
We're easy.**

clutch.ca

Brand copy lives at a different register than marketing, it's more playful, more voice-forward. Plum and Lavender Deep as backgrounds show the brand can hold personality-driven copy without defaulting to red every time. White on Plum and Plum on Lavender Deep both clear AA at display sizes. The Red accent on "We're easy." is consistent with how Red functions across the system: it lands the line.

Brand

**Sell your car naked.

The same copy on Soft Black and Clutch Red extends the brand palette into its two most energetic expressions. Soft Black keeps the wit grounded and editorial. Red turns it into a billboard moment. Both work because the type hierarchy is identical, the color is doing different emotional work, not different structural work. Consistency in structure, variation in feeling.

Product UI runs on White, Lavender Deep, and Plum. White is the default. Lavender Deep adds warmth to featured or promoted listings without breaking the product language. Plum is reserved for high-intent or favorited states, it signals something worth stopping for. Clutch Red stays as the CTA across all three; it's the one element that never changes context. The heart icon on Plum uses Red, it passes contrast and reinforces the action hierarchy.

Gradients

#460B28 → #84024A

#FF464C → #B00700

Gradients are scoped to buttons only.

Two options:

Plum to Magenta (#460B28 → #84024A) for secondary actions,

Red to Dark Red (#FF464C → #B00700) for primary CTAs.

The gradient adds depth and a sense of quality to interactive elements without introducing a third visual language. Flat color works for most surfaces — the gradient earns its place on the thing you most want someone to press.

UI Labels

Button states from one color system. Clutch Red fill for primary. Plum fill for secondary. Lavender fill with dark text for tertiary. Plum outline for ghost. Red outline with Red text for ghost-primary. Every state is legible. Every state is on-brand. The system doesn't require custom one-off colors for edge cases these five cover the full range of UI hierarchy.
